Discovery Light

Thank you for purchasing the Discovery Lights from Osculati. Our products are built to ensure a long lifetime in the most extreme marine conditions.
They can be applayed to all the yachts under 20 meters lenght, sailing boats, fish boats, motor boats and others.
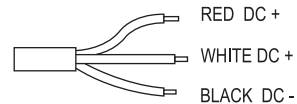

1 - Mounting

The first step to set your light in the right position is find the alignment to the vassel centerline, inside mounting base component is ingraved and harrow that indicate the front direction.
Be sure that the position of installing ensure the light's maximum visibility. After accuratly decided the position fix the base with three screw.

2 - Connecting power

The light is supplied by a DC 12/24 V Input wire. The included extended length of input wire is 500mm. Users should prepare extra extended wire with corresponding length according to the actual application. To avoid any function defective of the light, the waterproof process of the joint position for the wire connection must be reliable. When cable is ready, connect the waterproof connector and plug it firmly (when connecting the waterproof connector, make sure that the wire cores with same color are aligned with each other).

RED DC +
WHITE DC +
BLACK DC -

3 - Close the light

Align vertically the top light on the bottom, push and twist to lock the shell.
Than insert the lock screw for security close.
